June 1, 2019

Parents of Sophomore HONORS GEOMETRY Students:

To prepare your child for the Honors Geometry Course, we have created summer work that is required and will be due and collected on the first day of class. Students will be assessed on these skills during the first week of school. The summer assignment and assessment will be reflected on the First Marking Period report card. The summer work is located on our Google Classroom Website. Your child will need to be logged in to their RBR email. Access information is listed below.

**RBR Email:** first initial lastname22@students.rbrhs.org  
**Password:** the same they have used all year

**Google Classroom Website:** classroom.google.com  
**Class Code:** nlkezh

The summer work is divided into four sections due 7/15, 7/30, 8/15, and 8/30. These dates are a suggested pacing guide for students so that they can stay on schedule. The summer work requires that students complete notes while watching a video and then complete practice problems. The notes and practice, worth a total of 30 points, will be collected on the first day of school. The final assignment is a checkpoint assessment, which is also worth a total of 30 points. Students should review notes/practice and prepare prior to completing the checkpoint.

The work is a compilation of the Algebra skills and prior geometry knowledge that your child should be proficient in prior to September. It is geared towards skills that students should have mastered, but tend to struggle with during Honors Geometry.

We look forward to the new school year. Enjoy the summer!

Best regards,
Sophomore Honors Geometry Teachers, RBR
